Tools:

Visual studio, Visual Studio Code, IntelliJ, PyCharm, MATLAB, Docker, Adobe Illustrator/Photoshop, Git, SourceTree, FileZilla, Bitbucket, GitLab, GitHub, Microsoft teams, Trello, Slack

Cloud:

AWS, Heroku

Development methodologies:

Agile/Scrum, CI/CD

Language skills:

Native Japanese, Native Chinese, Fluent English

Project 1: Sports Organization Search Responsive Website:

Description: An interactive website for teenagers searching suitable sports clubs and managing health. Teenagers can type sports facilities, locations to find sports clubs and get the information of air conditions around the areas in Queensland.

My Key Responsibilities/ Achievements:

- Designed and implemented the homepage for the website using HTML, CSS, Bootstrap, JavaScript.
- Integrated data from the Queensland Government database API with frontend utilizing PHP.

Project 2: Margherita Pizza Ordering Web Application:

Description: A responsive web application for the pizza lovers. Clients are able to order, check availabilities, customize their own pizza, make payment and share blogs anywhere anytime.

My Key Responsibilities/ Achievements:

- Implemented the pizza details, pizza builder and contact pages using React, Redux.
- Integrated pizza and ingredients data from database with frontend utilizing Node.js.
- Implemented location map using google map API.

Project 3: The Pet Project

Description: A web management system for users who want to adopt or foster animals. Admin can manage users and animals' profiles and adoption or fostering requests.

My Key Responsibilities/ Achievements:

- Designed and implemented the homepage, application form, contact form using Ruby, Tailwind, JavaScript, MVC.

Project 4: Kite Visit

Description: A responsive management system for a Noosa health care facility. Admin can manage residents and visitors' information, facilities' information, booking information.

My Key Responsibilities/ Achievements:

- Implemented create, edit, delete visitors, sort residents/ facilities display order, display booking history, view residents' details, QR code and formatted layout using Ruby, Tailwind, MVC.

URL: https://kitevisit.uat.2rk.dev/

Project 5: All about stone
Description: An official responsive website for all about stone company.

My Key Responsibilities/ Achievements:

- Implemented the Home, Products, Services and Contact pages using HTML, CSS, Bootstrap, C#, JavaScript, MVC.

- Implemented contact forms using C#, Bootstrap, CSS.

- Implemented send message backend using C#.

URL: https://all-about-stone.victorion.com.au/

Project 6: Victorion

Description: An official responsive website for my current company.

My Key Responsibilities/ Achievements:

- Implemented the Home, About, Services and Contact pages using HTML, CSS, Bootstrap, C#, JavaScript, MVC.

- Implemented contact forms using C#, Bootstrap, CSS.

- Implemented location map using iframe library.

- Implemented send message backend using C#.

URL: https://new.victorion.com.au/

Project 7: Visiplan

Description: A management system for multi businesses.

My Key Responsibilities/ Achievements:

- Implemented the countries list, currency settings' create, edit and delete pages using Angular, Typescript, JavaScript, Bootstrap, MVC.

- Created backend tables (e.g. Countries) using Microsoft SQL.

- Integrated backend countries and currency settings data with frontend utilizing C#.
